

Sphinx

[Sphinx](#) is used to generate the in-application manual. The content of the manual can be changed in the **.rst** ([Restructured text](#)) files at sphinx/source.

Edit manual

Changes are made in the **.rst** files at **sphinx/source**

Generate documentation

After editing, the HTML sites have to be generated. To avoid merge conflicts, please make changes only in the **develop** branch and push it afterwards.

After finishing changes, it is a good practice to delete the **openatlas/static/manual** directory **and generate the whole manual again**. Otherwise, sometimes not all changes (e.g. menu structure) may be propagated correctly.

```
sphinx-build ./sphinx/source/ openatlas/static/manual
```

Install Sphinx

```
apt install python3-sphinx python3-sphinx-rtd-theme
```
